

COVID 19 Statement

To: Valued Intronix Technology customers **SUBJECT: Coronavirus Update April 17, 2020**

The coronavirus (COVID-19) outbreak continues to evolve and so does the related impact on local and global health and related economies. Intronix is working hard to monitor the situation and assess any impact daily operations. Suffice it to say that we have incorporated disinfection regimens throughout our research and development programs. Production lines for Myoguide have been shut down, during this crisis. ***Keep in mind that Kego Corp. continues to have access to available stock, in Canada; and Ambu USA continues to have stock that have been accumulated before the Covid crisis.***

Service and Support:

Intronix Technologies is committed to providing excellent customer service and support. Our Service team remains responsive and we are working hard to ensure the same levels of service and support to our customers. As always, technical support will continue to be available by phone and via WebEx.

Cleaning and Disinfection:

Recommendations for cleaning and disinfecting Myoguide units are included in the Myoguide Instruction Manual, as well as, on the Myoguide iNFOcard included with every Myoguide purchased.

We suggest wiping Myoguide units with a minimum of 70% alcohol, or use of non-phenol disinfectant wipes (Phenols damage plastic), such as: Optim 33TB wipes (SciCan). Please refer to this information as you implement efforts to control the spread of COVID-19 in your facility.

Thank you for your understanding and cooperation as we monitor and navigate this important global health issue.

Best Regards,
Intronix Technologies Corporation
